Lesson - 37

React events
(Re-implement todo app)

SkillUp by Dobrea Vladislav
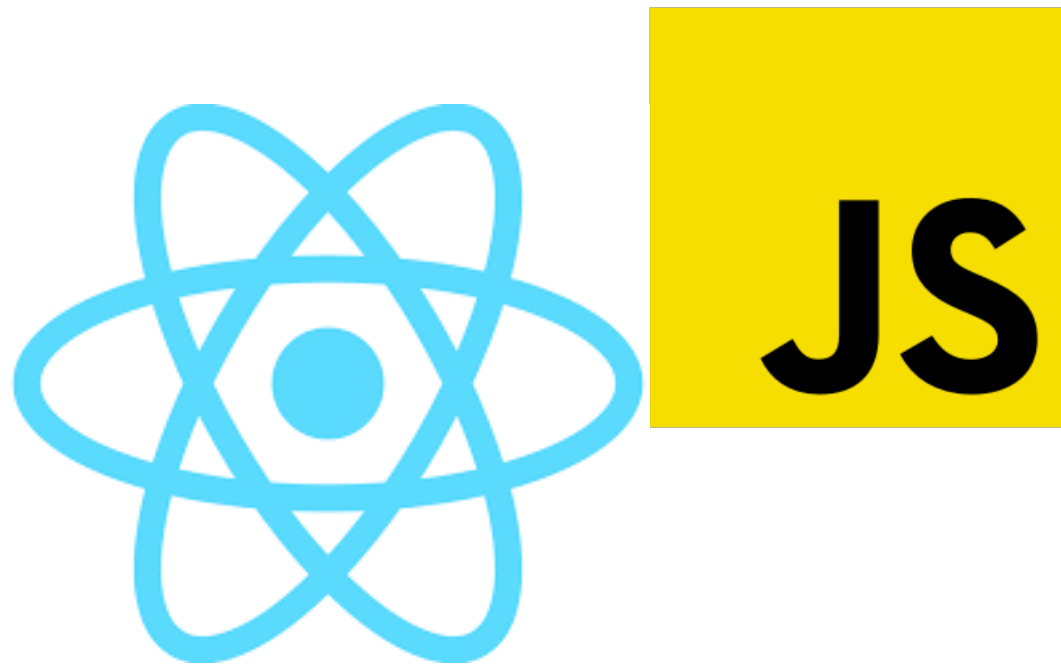

Lesson Plan

- React events

- Re-implement todo app

What to read

1. React events:

   1. https://reactjs.org/docs/handling-events.html

   2. https://www.w3schools.com/react/react_events.asp

Home work

1. Create new TodoList component(create it in separate file) that will render all todoItems from state (we started this in class App.js on line 51)

2. TodoList component should render in .map() method(example in classwork), TodoItem(create it in separate file).

3. TodoItem should contain the same structure that we did in todo app project (checkbox, label, and delete button)
